Intelligent Video Q&A

1. How to draw lines?

Right click to show Edit and draw the line as you want.

After draw three lines, right click to finish the quadrangle.

Note: The intelligent function only support quadrangle now.

　　　The line or the region should better stay in the center of the whole screen.

　　　Please don't draw the lines near the image edge.

2. Each objects can be detected whatever the size of it?

Nope, the length and width of object should bigger than 1/10 of resolution's length and width.

3. What's the apply scene of tripwire and intrusion?

It will be better if the distance of the target and camera further than 6 meters and the camera should keep 4 meters high above at least.

4. How long the detection time can be?

In the first version, it support max to 15 sec. In the next version, it will support max to 600 sec.

5. Why the dotted lines remain after deleting?

It can remind you which region you detected last time to help you better management and monitoring.
