

DeviceManage Quick Start (V1.1.0)

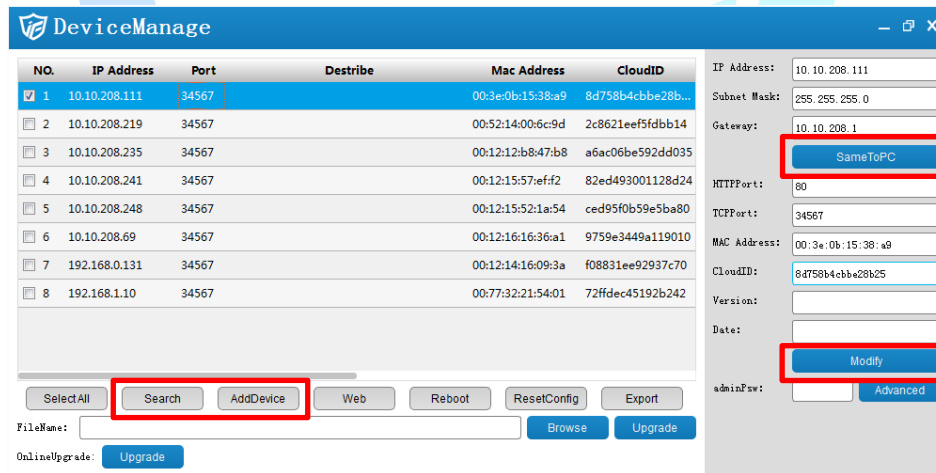

DeviceManage could be used for searching online JF device and updating firmware, please make sure your PC and the device are in one local area network.

Search the device

Click “search” to display all online JF devices or click “AddDevice” to add device manually. Select the device, its configuration information show on the right.

Modify the configuration

Select the device and modify the configuration on the right, or click “Same to PC” to configure device IP automatically. Then input device’s password in “adminPsw” option, click “Modify” to save the change.

NO.	IP Address	Port	Describe	Mac Address	CloudID
